```
. ***  Hausman test: random or fixed effects

.
. hausman FErgress REgress, sigmamore

Note: the rank of the differenced variance matrix (2) does not equal the number of coefficients being tested (4); be
        you expect, or there may be problems computing the test.  Examine the output of your estimators for anything
        possibly consider scaling your variables so that the coefficients are on a similar scale.

                 ---- Coefficients ----
             |      (b)          (B)            (b-B)     sqrt(diag(V_b-V_B))
             |    FErgress     REgress       Difference       Std. err.
-------------+----------------------------------------------------------------
         D88 |   -.0802157    -.0934519        .0132363        .0107669
         D89 |   -.2472028    -.2698336        .0226308        .0219962
       GRANT |   -.2523149     -.214696       -.0376188        .0306006
     GRANT_1 |   -.4215895    -.3770698       -.0445197        .0467426
------------------------------------------------------------------------------
                          b = Consistent under H0 and Ha; obtained from xtreg.
           B = Inconsistent under Ha, efficient under H0; obtained from xtreg.

Test of H0: Difference in coefficients not systematic

    chi2(2) = (b-B)'[(V_b-V_B)^(-1)](b-B)
            =   2.59
Prob > chi2 = 0.2738
(V_b-V_B is not positive definite)
